Quick Drill: Explaining Science Answers **(24 marks)**

Explain your answer in full sentences. Each question is worth 3 marks.

1. A butterfly's life cycle includes a pupa stage, but a grasshopper's life cycle does not. Explain what happens inside the pupa. (3 marks)

2. A chick looks similar to a hen soon after hatching, but a tadpole looks very different from an adult frog. Explain this difference. (3 marks)

3. A pupil says mushrooms must be plants because they grow from the ground. Explain why mushrooms are fungi, not plants. (3 marks)

4. Both mushrooms and ferns can reproduce using spores. Explain why this does NOT make them the same kind of living thing. (3 marks)

5. A pupil tests how high three different balls bounce by dropping each one from the same height onto the same floor. Describe what was changed, what was kept the same, and why this makes it a fair test. (3 marks)

6. A pupil grows three identical seedlings in the same type of soil and gives them the same amount of water, but places them in different amounts of sunlight. Describe what was changed, what was kept the same, and why this makes it a fair test. (3 marks)

7. A pupil wants to choose a material to make a raincoat. Explain why plastic would be a good choice, giving its properties and the reason each one matters. (3 marks)

8. A pupil wants to choose a material to make a drinking cup for a young child. Explain why plastic would be a good choice rather than glass, giving its properties and the reason each one matters. (3 marks)
